

Home, Home on the Rain Forests

The rain forests have a climate that stays hot all year long. In the tropical rain forests, the tops of the trees and vines form a thick overhead covering called a canopy. The monkeys play in the canopy. Orangutans, gibbons and other apes live in the rain forests. Colorful parrots and other birds live in the trees. Snakes and insects grow to a very large size in the rain forest environment and roam the entire forest.

Color the rain forest below. Cut out the animals on the next page and place them where they will be happy in the rain forest.

Find Me a Home Where the Rain Forests Roam . . .

Cut out these animals and place them at home in the rain forest on page 202.
